

# Statuae Deorum Hominumque: The Distinction in Epigraphic Statuary Terminology between Divine and Human Representation in Africa Proconsularis and Beyond

Kevin Roth

*The sheer number of Latin words for 'statue' suggests that there might be some semantic difference among them. Some scholars have claimed that statua and imago refer only to statues of persons, while signum and simulacrum are reserved for statues of gods. Analysis of epigraphic evidence from Africa Proconsularis reveals that this assessment is only partially valid: statua is used indiscriminately for human and divine statues. Evidence from the rest of the Roman Empire confirms the flexibility of the term statua.*

The Latin language possesses several words that could be translated as ‘statue:’ *statua*, *signum*, *simulacrum*, *imago*, and *effigies*. These terms, however, are not all synonyms. Through analysis of literary evidence some scholars have concluded that *statua* and *imago* refer to statues of persons, while *signum* and *simulacrum* are reserved for statues of gods. These conclusions are partially confirmed and partially challenged by investigation of epigraphic evidence.

Sylvia Estienne, in her study of literary sources concludes that the terms *signum* and *simulacrum* refer exclusively to statues of gods, while *statua* and *imago* are reserved for depictions of mortals. The term *effigies* is applicable to either category, but is rarely encountered. She displays her findings quite concisely in a table, but unfortunately does not provide any footnotes to explain where she gets her information.<sup>1</sup> She characterizes *signum* and *simulacrum* as fundamentally synonyms, but distinguishes the former as the older and more common term and the latter as more specifically an anthropomorphic depiction of a god.<sup>2</sup> *Imago* specifically is a bust.<sup>3</sup> Peter Stewart broadly agrees with Estienne’s dichotomy of human and divine statues, but adds that the Latin terms *statua* and *simulacrum* are the equivalent of the Greek *andrias* and *agalma*.<sup>4</sup> Stewart departs from Estienne in equating the term *simulacrum* with ‘cult statue.’<sup>5</sup>

These conclusions about Latin statuary terminology are based almost entirely on literary sources. The present work will investigate whether epigraphic evidence leads to the same conclusions. The words *statua*, *signum*, *simulacrum*, *effigies*, and *imago* appear too frequently within Latin inscriptions to allow for analysis within the empire as a whole.<sup>6</sup> To limit the scope of the investigation, the province of Africa Proconsularis will initially serve as a microcosm for the empire as a whole.

Inscriptions that refer to statues are quite common and overwhelmingly occur on the bases that once held those statues. Since statues are less durable than their bases, typically little remains of the statue itself. This presents a significant problem for the analysis of statuary terminology: the word itself is clear enough, but often there is no explicit mention of what the statue depicts. This is understandable, since it would have been obvious from the statue itself. Consequently, the corpus of suitably unambiguous inscriptions is more limited than would be desirable. In the case of inexplicit references, some are more likely to be one type of statue or another, but cannot be absolutely identified. Unambiguous evidence of the nature of a statue is provided by the use of a noun in the genitive case adjacent to a word for ‘statue,’ e.g. the following inscription (AE 1955, 00196): [De]i Herculis simu[lacrum] / M(arcus) Pacatus Amil

The term *imago* appears exceedingly rarely on inscriptions in Africa Proconsularis, and often its use is ambiguous, but in five cases it seems to clearly refer to people.<sup>7</sup> This supports the conclusion of Estienne and Stewart, but is insufficient to be conclusive. Estienne makes the further point that the term *imago* is specifically a bust (inherently of a human) rather than a full statue. The epigraphic evidence from Africa Proconsularis is ambiguous on this point, but nowhere else is there evidence to support Estienne’s conclusion. The term *imago* refers to far more than simply the famous wax busts of ancestors that prominent Romans kept in special cabinets in their atria and put on display in funeral processions. Such a scenario strikes the imagination so strongly that it is easy to forget that ancient accounts of this practice are limited and that the basic definition of the term is revealed by what the word *imago* has come to mean in English.<sup>8</sup> Stewart argues that the term simply means ‘statue’ and is often used synonymously

with *statua*, and very often together with it in the phrase *statuae et imagines*.<sup>9</sup>

The inscriptional evidence for *simulacrum* is somewhat clearer because it never refers to statues of humans. Rather, in five inscriptions the word clearly refers to gods and in two additional ones seems to, but only after extensive reconstruction.<sup>10</sup> An additional inscription is puzzling.<sup>11</sup> It includes a reference to what seems to be a statue, but no term for 'statue' is used. Instead, the name of the goddess depicted is put in the accusative case, much as today someone might call a copy of the Venus de Milo simply a Venus de Milo. Following the name of the goddess (*Fortuna Victrix*) is the phrase *cum simulacris victoriarum*. *Victoria* was the personified goddess of military success, but she was conceived of as one deity. It is possible that the plural *victoriarum* of the inscriptions indicates that there were several individual statues of the goddess. It is also possible that the *victoriae* are representations of successful battles, not depictions of deities.

As for *signum*, there are no inscriptions that unambiguously refer to a statue of a human, but there are three that clearly refer to gods, and a fourth that seems to refer to a deity, but this conclusion is vitiated by reconstruction.<sup>12</sup> In addition, there are two inscriptions that mention statues of the she-wolf together with the twins (though in one case the word *signum* is reconstructed) and one that depicts a statue of Marsyas.<sup>13</sup> Both of these figures are, strictly speaking, mythological characters rather than gods, since they were not worshipped and were not believed to possess any of the powers associated with gods, but nonetheless they were important. The she-wolf supposedly suckled the infants Romulus and Remus and a statue of Marsyas stood in the Roman forum, possibly on the rostra itself, as a symbol of free speech.<sup>14</sup> These figures presumably ranked closer to gods than to men, and so the use of the term *signum*

in reference to statues of them does not negate the conclusion that the term excludes sculptures of humans.

In all of Africa Proconsularis there is only one inscription that includes the word *effigies*, and it is in such a poor state that it is difficult to understand exactly what the inscription is trying to convey, let alone ascertain the identity of the effigies.<sup>15</sup> The ambiguity here does not contradict the findings of other scholars, who declare that the rather rare term can be used for any kind of statue.<sup>16</sup>

Estienne and Stewart both argue that *statua* refers specifically to a statue of a person.<sup>17</sup> The inscriptional evidence from Africa Proconsularis confirms that the term can refer to a statue of a human, but it is surprisingly difficult to find an inscription that unambiguously mentions a *statua* of a person. There is only one example that specifies with the genitive, but there is an additional inscription in which the genitive phrase that is attached to *statua* is reconstructed.<sup>18</sup> There are, however, numerous examples of *statuae* that almost certainly depict a person. Though a name in the genitive adjacent to *statua* is almost non-existent, there are many inscriptions that begin with the name of a person in the dative case. If an individual or, as often happened, the local government erected a statue to or someone, then it is likely that that statue depicts that person, particularly if no other person or god is mentioned in the same inscription. There are many examples of this type of inscription.<sup>19</sup>

A specific category of *statua* consists of depictions of living emperors. As with the *statuae* of non-imperial men, there are no completely unambiguous usages of the term, but there are several whose context makes it extremely likely that the statue is of the contemporary, living emperor. One inscription begins with the name of the emperor Caracalla in the dative case

and later mentions a *statuam togatam*.<sup>20</sup> Since the toga was specifically the garb for Roman men, it seems likely that this statue depicts the emperor wearing a toga. The second inscription begins with Antoninus Pius and Lucius Verus in the dative and later specifically mentions *statuas duas*, so it is within the realm of possibility that the two statues depict the emperor and his adopted son.<sup>21</sup> The third inscription is very similar in basic form to the second: it begins with Caracalla and Julia Domna (the emperor's mother) in the dative case, to whom a local notable gave *statuas duas*.<sup>22</sup>

Africa Proconsularis offers nine inscriptions that include the word *statua* in obvious reference to a god, as indicated by the use of the genitive case.<sup>23</sup> Such usage is not specific to one or a limited number of gods, but includes Saturn, Mars, (Juno) Caelestis, Hercules, Mercury, Fortuna, the Genius Curiae, Cupid, Concordia, and Asclepius. One of these inscriptions (CIL 08, 01548) mentions a *templum Cererum*. A multitude of goddess of agriculture, rather than a single Ceres, is attested only in African inscriptions (with only two exceptions, both of which can be attributed to African influence).<sup>24</sup> In addition to the unambiguous examples, there are a further eight inscriptions that mention statues that are very likely to be divine, but whose wording is either slightly ambiguous or partially reconstructed.<sup>25</sup> Furthermore, one inscription bears the term *statua* applied to a deified emperor (Hadrian), who would be appropriately classified as a god rather than man.<sup>26</sup> Examination of similar inscriptions from the other provinces of Roman Africa shows that this usage of *statua* is not a peculiarity of Africa Proconsularis: five inscriptions from other African provinces show the same result.<sup>27</sup> Within this last group, two are of particular interest (AE 1941, 00046; CIL 08, 08313) since in both instances statues of both gods and men are listed and the term *statua* is used for each.

Thus, one must conclude that, epigraphically at least, *statua* can be a statue of a man or god. This discovery, however, is not completely original to the present work. In a footnote to an article, the German scholar Jörg Rüpke noted that in a paper delivered in 2010 Estienne commented that in Africa *statua* usually refers to statues of gods.<sup>28</sup> This little disseminated finding, as stated, is somewhat misleading, since Africa displays enough inscriptions describing a *statua* of a person that it is more accurate to say that the term can indiscriminately refer to each type of statue, rather than that it usually refers to statues of gods. Estienne is incorrect, furthermore, in limiting this proviso to Africa.

Further investigation reveals that *statua* clearly refers to a statue of a god in inscriptions from provinces throughout the Roman Empire.<sup>29</sup> The eight examples come from the disparate regions of Italy, Syria, Asia Minor, Greece, and Sicily. In all the provinces of Roman Africa the total number of inscriptions containing the word *statua* in reference to a statue of a god (or divine emperor) is thirteen. This is *prima facie* evidence that the practice of using *statua* to refer indiscriminately to statues of gods and people was more common in Africa than anywhere else in the Roman world, but further research is necessary to disprove or confirm this possibility, and even further research is needed to explain it. The most significant point, however, is that the ambiguous usage of *statua* is not at all confined to Africa.

These findings show that one would be ill advised to use the term *statua* to make a conclusion about the identity of the figure depicted, in the absence of other information. In her chapter within to *Divine Images and Human Imaginations in Ancient Greece and Rome* Estienne mentions an inscription from Lanuvium which includes the term *statua*.<sup>30</sup> The term immediately follows an abbreviation

that clearly refers to Juno Sospes. Since the goddess' name appears as a series of letters, it is impossible to determine its grammatical case. If the name is assumed to be in the genitive case, then clearly this would have to be a statua of a god. If the dative case is restored, then it could be a statue of the goddess, or of someone else (presumably the emperor Hadrian, who ordered the statue to be made out of the old and worn-out gifts dedicated to the temple). Estienne concludes that it must be the latter, basing her decision solely on the use of the term *statua*, which she argues is used exclusively for statues of persons.<sup>31</sup> Though her research with literary evidence supports this conclusion, the evidence presented here shows that it is untenable in light of the ambiguity of the term *statua*.

The ambiguous meaning of *statua* is confined to its usage in epigraphy. These findings do not contradict Estienne's conclusion concerning the usage of the word in ancient texts. This contrast between the usage of a word in literature and in inscriptions is mirrored in Greek. The word *agalma*, which Stewart equates with the Latin *simulacrum*, is used within literary sources in reference only to divine statues, but on inscriptions it can also refer to statues of people.<sup>32</sup> Thus, both Greek and Latin possess a statuary term that is used in a more restricted fashion in literature than on inscriptions.

Both literary and epigraphic evidence indicate that the terms *signum* and *simulacrum* are used exclusively for statues that depicted gods, mythological figures, or deified emperors. In contrast *imago* refers to a statue of a person, likely a full statue rather than simply a bust. The term *statua* is applied only to statues of humans in ancient writings, but the epigraphic usage is ambiguous, referring to statues of both men and deities.
